Going Public over the Business Cycle

Jisu Jeun

Goethe University Frankfurt

"For business owners who want to take their companies to the next level, this bill will make it easier for you to go public. And that's a big deal because going public is a major step towards expanding and hiring more workers."

Source: Remarks by President Obama at JOBS Act Bill Signing (April 5th, 2012)

What does **going public** mean?

- Private firms become public as they begin trading shares in the public stock market
- Firms typically go public through an Initial Public Offering (IPO)

• Empirical evidence shows that IPOs increase employment at firm level

(Borisov, Ellur, and Sevilir, 2021)

ightarrow Raise capital via IPO ightarrow Invest ightarrow Expand

Jisu Jeun 2 / 27

Empirical evidence shows that IPOs increase employment at firm level

(Borisov, Ellur, and Sevilir, 2021)

- ightarrow Raise capital via IPO ightarrow Invest ightarrow Expand
- IPO activity aligns closely with the business cycle

→ It is well-established that the number of IPOs is procyclical < Figure

| Number of firms | -2.35 | -1.14 | 52.30 |
| Entry rate | -6.57 | -5.94 | 9.59 |

- Without capital injection cyclicality, employment decreases less by 1.4%
 - → Extensive margin is the main driver, rather than intensive margin
 - Capital injection at IPO has a short-term effect

| | Baseline | Counterfactual II | Dev. (%) |
|--------------------|----------|-------------------|----------|
| Employment | -6.44 | -6.35 | 1.40 |
| Mean size of firms | -4.05 | -4.03 | 0.49 |
| Public firm share | -2.39 | -2.10 | 10.64 |
| Number of firms | -2.35 | -1.14 | 52.30 |
| Entry rate | -6.57 | -5.94 | 9.59 |

- Without capital injection cyclicality, employment decreases less by 1.4%
 - → Extensive margin is the main driver, rather than intensive margin
 - Capital injection at IPO has a short-term effect
 - Expected future value of entry responds to the long-term stability in financing

| | Baseline | Counterfactual II | Dev. (%) |
|--------------------|----------|-------------------|----------|
| Employment | -6.44 | -6.35 | 1.40 |
| Mean size of firms | -4.05 | -4.03 | 0.49 |
| Public firm share | -2.39 | -2.10 | 10.64 |
| Number of firms | -2.35 | -1.14 | 52.30 |
| Entry rate | -6.57 | -5.94 | 9.59 |

Conclusions

• I analyze IPO cyclicality

ightarrow In recessions, IPO firms are fewer, smaller, raise less capital, and grow slower

Conclusions

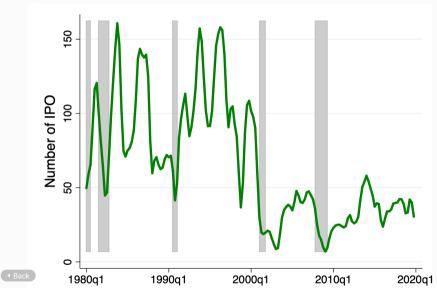

- I analyze IPO cyclicality
 - ightarrow In recessions, IPO firms are fewer, smaller, raise less capital, and grow slower
- I develop a quantitative model and calibrate to the U.S. economy
- I quantify the role of IPO cyclicality on aggregate employment during recessions
 - → It amplifies aggregate employment volatility by **10 percent!**
 - → Fewer IPOs during recessions
 - mean size of firms decreases by 9 percent (capital misallocation)
 - number of firms decreases by 15 percent (business dynamism)

→ Here, cyclicality of capital injection plays a role by 1.4 percent

Conclusions

- I analyze IPO cyclicality
 - ightarrow In recessions, IPO firms are fewer, smaller, raise less capital, and grow slower
- I develop a quantitative model and calibrate to the U.S. economy
- I quantify the role of IPO cyclicality on aggregate employment during recessions
 - → It amplifies aggregate employment volatility by **10 percent!**
 - → Fewer IPOs during recessions
 - mean size of firms decreases by 9 percent (capital misallocation)
 - number of firms decreases by 15 percent (business dynamism)
 - → Here, cyclicality of capital injection plays a role by 1.4 percent
- Promoting more IPOs during recessions could accelerate economic recovery!

Procyclical Number of IPOs

Source: Compustat

Sample Selection

- Exclude ...
 - → Utilities, financial firms, and public administration
 - → Headquartered outside the U.S.
 - → Underwent leveraged buyouts and subsidiaries
- Focus on IPO firms seeking financing
 - → Firms typically conduct IPOs to raise funds or establish public valuation
 - → Exclude firms delisted shortly after going public for the following reasons:
 - Acquisition or merger (11.8%)
 - Reverse acquisition (1.3%)
 - Leveraged buyout (0.5%)
